CHAPTER 3.0 - LOADING, UNLOADING AND CARRIAGE OF MATERIALS

Notes:

1.1 The carriage and stacking of materials shall be done as directed by the Engineer-in- Charge. Any tools and plants, required for the work shall be arranged by the Contractor. The carriage of materials includes loading within a lead of 50 metres, unloading and stacking within a lead of 50 metres.

1.2 Loading, carriage, unloading and stacking shall be done carefully to avoid loss or damage to the materials. In case of any loss or damage, recovery shall be effected from the Contractor at twice the prevailing market rates as determined by the Engineer-in-Charge.

1.3 Depending upon the feasibility and economy, the Engineer-in -Charge shall determine the mode of carriage viz. whether by mechanical or animal transport or manual labour.

1.4 All distances shall be measured over the shortest practical route and not necessarily the route actually taken. Route other than shortest practical route may be considered in cases of unavoidable circumstances and as approved by Engineer-in-Charge.

1.5 Carriage by manual labour shall be reckoned in units of 50 metres or part thereof.

1.6 Carriage by animal and mechanical transport shall be reckoned in one km unit. Distances of 0.5 km or more shall be taken as 1 km and distance of less than 0.5 km shall be ignored. However, when the total lead is less than 0.5 km, it will not be ignored but paid for separately in successive stages of 50 metres subject to the condition that the rate worked on this basis does not exceed the rate for initial lead of 1 km by mechanical/ animal transport.Measurement of materials: - While making measurements for supply of materials like boulder, aggregate, etc., suitable deduction for voids shall be made as per PWD Specifications, CPWD Specifications and MORT&H specifications.

1.7 The storage and stacking of various materials shall be governed by BIS Code: 4082.

1.8 Carried material shall be placed close to the site of work so that least effort is required to unload and transport it again.

1.9 For materials unloaded and stored in stacks , Length, breadth and height of stacks shall be measured correct to a cm. The quantity shall be worked out in cubic metre correct to two place of decimal. The volume of stacks shall be reduced by percentages as shown against each for looseness in stacking to arrive at the net quantity for payment . No reduction shall be made in respect of articles or materials for which mode of payment is by length or weight or number.

1.10 The rates of loading, unloading and stacking shall also include the loading, unloading and stacking of containers in which the materials are contained. For instance, if 100 tonnes of bitumen are loaded or unloaded in 160/200 litres drums, the net weight of bitumen will be 100 tonnes and weight of the drum will be over and above this weight. Nothing extra will be paid for the weight of the bitumen drums which are supposed to be carried in addition to the bitumen within the same rate.

1.11 The bricks and tiles shall be properly stacked in vehicles while loading and when unloading, these shall be directly placed in stacks and not dumped on the ground and then stacked. In case of bricks and tiles, nominal sizes have been mentioned in the Schedule of Rates. In PWD specifications certain tolerance limits have been provided for these materials. Variation of sizes within these limits will be ignored for the purpose of loading, unloading and carriage of these materials.

1.12.1.2 In fills consolidated by light mechanical machinery – 10%

1.12.1.4 In fills consolidated by heavy mechanical machinery at OMC – Nil

1.12.1.5 Consolidated fills in confined situation such as under floors. etc. – Nil

1.13.1.5 Soling stone/ Boulder 100 mm and above – 15%

1.13.1.6 Excavated rocks – 50%

1.14 The rate for carriage of materials are inclusive of all the operations described above.

1.15 These rates are exclusive of GST, Labour Welfare Cess and Contractor's profit but inclusive of all other taxes.

CHAPTER 4.0 - EARTH WORK AND ROCK CUTTING

COMMENTS

1. This chapter contains earthwork items pertaining to building works only. Items of earth work related to road work, river works and deep foundations has been incorporated in respective chapters.

2. Items of earth work for soil and rock cutting has been clubbed in this chapter.

3. Items of rock cutting without blasting and with blasting has been included.

4. Item of pre-construction as well as post-construction anti-termite treatment has been included.

5. Initial lead of 50m and lift of ±1.5m is included in the first stage item of the earth work.

NOTES

1. Lead : All distances shall be measured over the shortest practical route and not necessarily the route actually taken. Route other than shortest practical route may be considered in cases of unavoidable circumstances and approved by Engineer-in-charge along with reasons in writing. Carriage by animal and mechanical transport shall be reckoned in one km. unit. Distances of 0.5 km. or more shall be taken as 1 km. and distance of less than 0.5 km. shall be ignored.

2. Lift: The vertical distance for removal with reference to the ground level. The excavation up to 1.5 metre depth below the ground level and depositing the excavated materials up to 1.5 metre above the ground level shall be included in the rate of earth work. Lifts inherent in the lead due to ground slope shall not be paid for.

3. Safety rules: Safety rules as laid down by the statutory authority and as provided in Haryana Building Code (HBC) shall be followed.

4. CLASSIFICATION OF SOILS: The earthwork shall be classified under the following categories and measured separately for each category:

(a) All kind of soils: Generally any strata, such as sand, gravel, loam, clay, mud, black cotton moorum, shingle, river or nallah bed boulders, siding of roads, paths etc. and hard core, macadam surface of any description (water bound, grouted tarmac etc.), lime concrete, mud concrete and their mixtures which for excavation yields to application of picks, showels, jumper, sacrifiers, ripper and other manual digging implements.

(b) Ordinary rock: Generally any rock which can be excavated by splitting with crow bars or picks and does not require blasting, wedging or similar means for excavation such as lime stone, sand stone, hard laterite, hard conglomerate and un-reinforced cement concrete below ground level.

(c) Hard rock: Generally any rock or boulder for the excavation of which blasting is required such as quartzite, granite, basalt, reinforced cement concrete (reinforcement to be cut through but not separated from concrete) below ground level and the like.

(d) Hard rock (blasting prohibited): Hard rock requiring blasting as described under (c) but where the blasting is prohibited for any reason and excavation has to be carried out by chiseling, wedging, use of rock hammers and cutters or any other agreed method.

5. MEASUREMENTS

The length and breadth of excavation or filling shall be measured with a steel tape correct to the nearest cm. The depth of cutting or height of filling shall be measured, correct to 5 mm, by recording levels before the start of the work and after the completion of the work. The cubical contents shall be worked out to the nearest two places of decimal in cubic metres.

In case of open footings up to the depth of 1.5 metres, alround excavation of 30 cm. beyond the outer dimension of footing shall be measured for payment to make allowances for centering and shuttering.

In case of open footings/Rafts at a depth of more than 1.5 metre, alround excavation of 75 cm shall be measured for payment to make allowance for centering and shuttering.

6. RATES

Rates for Earthwork shall include the following:

(a) Excavation and depositing excavated material as specified.
(b) Handing of antiquities and useful material.
(c) Protection as specified.
(d) Site clearance as specified
(e) Setting out and making profiles as specified
(f) Forming (or leaving) dead – men or 'Tell Tales' in borrow pits and their removal after measurements.
(g) Bailing out or pumping of rain water from excavations.
(h) Initial lead of 50 m and lift of 1.5 m.
(i) Blasting operations for hard rock

No deduction shall be made from the rate if in the opinion of the Engineer- in- charge, operations specified above are not required to be carried out on any account whatsoever.

7. SURFACE EXCAVATION - Excavations exceeding 1.5 m in width and 10 sqm. on plan but not exceeding 30 cm. in depth in all types of soils and rocks shall be described as surface excavation.

8. Measurements

The length and breadth shall be measured with a steel tape correct to the nearest cm. and the area worked out to the nearest two places of decimal in square metres.

9. ROUGH EXCAVATION AND FILLING - Excavation for earth from borrow pits, cutting hill side slopes etc. shall be described as rough excavation.

Wherever filling is to be done, the earth from excavation shall be directly used for filling and no payment for double handling of earth shall be admissible. In case of hill side cutting, where the excavated materials is thrown down the hill slopes, payment for filling excavated earth shall not be admissible.

10. EXCAVATION OVER AREA (ALL KINDS OF SOIL, ORDINARY/ HARD ROCK)

This shall comprise**:**

(a) Excavation exceeding 1.5 m in width and 10 sqm on plan and exceeding 30 cm in depth.
(b) Excavation for basements, water tanks etc.
(c) Excavation in trenches exceeding 1.5 m in width and 10 sqm on plan.

11. EXCAVATION IN TRENCHES FOR FOUNDATIONS AND DRAINS (ALL KINDS OF SOIL, ORDINARY/ HARD ROCK)

This shall comprise excavation not exceeding 1.5 m in width or 10 sqm on plan and to any depth in trenches (excluding trenches for pipes, cables, conduits etc.)

12. EXCAVATION IN TRENCHES FOR PIPES, CABLES ETC. AND REFILLING

This shall comprise excavation not exceeding 1.5 mts in width or 10 sqm in plan and to any depth trenches for pipes. Cables etc. and returning the excavated material to fill the trenches after pipes, cables etc. are laid and their joints tested and passed and disposal of surplus excavated material upto 50 m lead.

13. Width of Trench

13.1 Upto one metre depth the authorized width of trench for excavation shall be arrived at by adding 25 cm to the external diameter of pipe (not socket/collar) cable, conduit etc.

13.2 For depths exceeding one metre, an allowance of 5 cm per metre of depth for each side of the trench shall be added to the authorized width (that is external diameter of pipe plus 25 cm) for excavation. This allowance shall apply to the entire depth of the trench. In firm soils the sides of the trenches shall be kept vertical upto depth of 2 metres from the bottom. For depths greater than 2 metres, the excavation profiles shall be widened by allowing steps of 50 cm on either side after every two metres from bottom.

13.3 Where more than one pipe, cable, conduit etc, are laid, the diameter shall be reckoned as the horizontal distance from outside to outside of the outermost pipes, cable, conduit etc.

13.4 Where the soil is soft, loose or slushy, width of trench shall be suitably increased or side sloped or the soil shored up as directed by the Engineer-in-Charge.

14. Measurements

Trenches for pipes, cables, conduits etc. shall be measured in running meter correct to the nearest cm in stages of 1.5 m depth and described separately as under:

(a) Pipes, cables, conduits, etc. not exceeding 80 mm dia.

(b) Pipes, cables, conduits etc. exceeding 80 mm dia but not exceeding 300mm dia.

(c) Pipes, cables, conduits etc. exceeding 300 mm dia.

15. PLANKING AND STRUTTING

When the depth of trench in soft/loose soil exceeds 2 metres, stepping, sloping and/ or planking and strutting of sides shall be done. In case of loose and slushy soils, the depths at which these precautions are to be taken, shall be determined by the Engineer-in-Charge according to the nature of soil. Planking and strutting shall be ‘close’ or ‘open’ depending on the nature of soil and the depth of trench.

16. Works shall be grouped according to the following:

a. Depth not exceeding 1.5 m.

b. Depth exceeding 1.5m in stages of 1.5 m.

17. EXCAVATION IN WATER, MUD OR FOUL POSITION

All water that may accumulate in excavations during the progress of the work from springs, tidal or river seepage, broken water mains or drains (not due to the negligence of the contractor) and seepage from subsoil aquifer shall be bailed, pumped out or otherwise removed. The contractor shall take adequate measures for bailing and/or pumping out water from excavations and/or pumping out water from excavations.

The earth work for various classification of soil shall be categorised as under:

a) Work in or under water and/or liquid mud: Excavation, where water is met with from any of the sources specified above shall fall in this category.

b) Work in or under foul position: Excavation, where sewage, sewage gases or foul conditions are met with from any source, shall fall in this category.

18. FILLING IN TRENCHES, PLINTH, UNDER FLOOR ETC.

Earth : Normally excavated earth from same area shall be used for filling. Earth used for filling shall be free from shrubs, rank, vegetation, grass, brushwood, stone shingle and boulders (larger than 75mm in any direction), organic or any other foreign matter. Earth containing deleterious materials, salt peter earth etc. shall not be used for filling. All clods and lumps of earth exceeding 8 cm in any direction shall be broken or removed before the earth is used for filling**.**

Filling : The space around the foundations and drains in trenches shall be cleared of all debris, brick bats etc. The filling shall be done in layers not exceeding 20 cm in depth. Each layer shall be watered, rammed and consolidated. Ramming shall be done with iron rammers where possible and with blunt end of crow bars where rammers cannot be used.

19. Measurements

Filling Side of Foundations: The cubical contents of bed concrete levelling course and masonry/ concrete in foundations up to the ground level shall be worked out and the same deducted from the cubical contents of earthwork in excavation for foundations already measured under the respective item of earth work to arrive at the quantity for filling sides of foundation.

Filling in Plinth and under Floors: Depth of filling shall be the consolidated depth. The dimensions of filling shall be on the basis of pre-measurement correct to the nearest cm.

20. SAND FILLING IN PLINTH

Sand : Sand shall be clean and free from dust organic and foreign matter and its grading shall be within the limits of grading zone IV or V.

Clearance of Grass : Clearing and grubbing operation for clearance of grass shall include removal of rubbish upto a distance of 50 m outside the periphery of the area under clearance.

24. FELLING TREES

Felling : While clearing jungle, growth trees above 30 cm girth (measured at a height of one metre above ground level) to be cut, shall be approved by the Engineer-in-Charge and then marked at site. Felling trees shall include taking out roots up to 60 cm below ground level or 30 cm below formation level or 15 cm below sub-grade level, whichever is lower. All excavation below general ground level arising out of the removal of trees, stumps etc. shall be filled with suitable material in 20 cm layers and compacted thoroughly so that the surfaces at these points conform to the surrounding area. The trunks and branches of trees shall be cleared of limbs and tops and cut into suitable pieces as directed by the Engineer-in-Charge.

Measurements : Cutting of trees above 30 cm in girth (measured at a height of one metre above level) shall be measured in numbers according to the sizes given below:

(a) Beyond 30 cm girth, upto and including 60cm girth.

(b) Beyond 60 cm girth, upto and including 120 cm girth.

(c) Beyond 120 cm girth, upto and including 240 cm girth.

(d) Above 240 cm girth.

25. ANTI-TERMITE TREATMENT

Termite control in existing as well as new building structures is very important as the damage likely to be caused by the termites to wooden members of building and other household article like furniture, clothing, stationery etc. is considerable. Anti-termite treatment can be either during the time of construction i.e. pre-constructional chemical treatment or after the building has been constructed i.e. treatment for existing building. Prevention of the termite from reaching the super-structure of the building and its contents can be achieved by creating a chemical barrier between the ground, from where the termites come and other contents of the building which may form food for the termites. This is achieved by treating the soil beneath the building and around the foundation with a suitable insecticide.

Materials

Chemicals: Any one of the following chemicals in water emulsion to achieve the percentage concentration specified against each chemical shall be used:

(i) Chlorphriphos emulsifiable concentrate of 20%

(ii) Lindane emulsifiable concentrate of 20%

To achieve the specified percentage of concentration, Chemical should be diluted with water in required quantity before it is used. For example, to dilute chemical of 20% concentration. 19 parts of water shall be added to one part of chemical for achieving 1% concentration.

Measurements : All dimensions shall be measured correct to a cm. The measurements shall be made of the surface actually provided with anti termite treatment. Measurements shall be done separately for treatment of foundations, soils under floors, voids in masonry and wood work:

(i) **Treatment along outside of foundations :** The measurements shall be made in running metres taking length along the plinth of the building.

(ii) **Treatment of soil under floors :** The measurements shall be made in square metres, inside clear dimensions of rooms, verandah etc. shall be taken.

(iii) **Treatment of voids in masonry :** The measurements shall be made in running metres along the plinth of the building.

(iv) Treatment of wood work : The measurements shall be made in running metres for chowkhats, joints, purlins, beams etc.

CHAPTER 8.0 - CLADDING WORK

NOTES:

A. STONE CLADDING AND VENEERING WORK (WET)

1.1 Stone lining upto 8 cm shall be treated as veneering work.The stone shall be gang saw cut into slabs of required thickness along the planes parallel to the natural bed of stone. Dressing at the back of the slab shall not be done, so as to ensure better grip with the backing. The dressed slabs shall be of the thickness as specified, with permissible tolerance of ± 2 mm.The stone shall be wetted before laying. They shall then be fixed with mortar in position without the use of chips or underpinning of any sort. Where so desired, the adjoining stones shall be secured to each other by means of copper pins 75 mm long and 6 mm diameter or as specified.

1.2 The stones shall be secured to the backing by means of cramps. The material for cramps shall have high resistance to corrosion under conditions of dampness and against the chemical action of mortar or concrete in which cramps are usually embedded. Minimum one cramp/stone dowel shall be used to secure one slab to the backing. The actual number of cramps and their sections, however, shall be as per requirements of design to carry the loads.The cramps shall be of copper alloyed with zinc or nickel or of stainless steel of grade 304.The pins, cramps and dowels shall be laid in cement mortar 1:2 (1 cement : 2 fine sand).

1.3 The walls shall be carried up truly plumb. All courses shall be laid truly horizontal and all vertical joints truly vertical. The stone shall break joints on the face for at least half the height of the course, unless otherwise shown in the drawings. The stone shall be laid in regular courses not less than 20 cm height and all the stones shall be of the same height unless otherwise specified. No stone shall be less in length than one and a half times its height unless otherwise specified.

1.4 The joints shall be done with cement mortar 1: 3 (1 cement : 3 coarse sand). The thickness of joints shall be as small as possible, not exceeding 5 mm.

1.5 The length and breadth of the finished work shall be measured in metre correct to cm. The area should be calculated in sq. metre correct to two places of decimal.

B. DRY STONE CLADDING

1.6 Stone shall be hard, sound durable and tough free from cracks, decay and weathering and defects like cavities cracks, flaws, holes, veins, patches of soft or loose materials etc. Stone shall be cut with the gang saw to the required size and shape on all beds and joints so as to free from any waviness and to give truly vertical horizontal surface as required. The dressed stone shall be of the thickness specified with permissible tolerance of ± 2 mm.

1.7 The cramps shall have inbuilt adjustment for vertical and horizontal alignment. The cramps used to hold support and transfer the load of stone unit to the supporting structured steel shall be designed by the manufacturer and approval of the same shall be obtained from the Engineer-in-Charge. The minimum number of clamps required shall be as per requirement of design to carry the load of individual stone slabs. Adequate cutting in stone shall be made with precision instrument to hold the cramps pins at the joints.

1.8 Joints horizontal and vertical shall be filled with weather sealant of approved make.

1.9 The properly designed structural frame for withstanding the weight of stone slab are fixed/supported on wall surface with the help of M.S. brackets/lugs of angle iron/flat etc. The frame can also be supported on RCC surface with the help of hold fastener by drilling the holes in RCC surface.

1.10 The rate shall include the cost of materials and labour involved in all the operations described above, except for the cost of providing and fixing pins, dowels and metal cramps, which shall be paid for separately unless otherwise stipulated in the item of work.

1.11 The rates are exclusive of GST but inclusive of all other taxes, Labour Welfare Cess and contractor's profit.

2.4 The sheets shall be laid with a minimum lap of 15 cm at the ends and 2 ridges of corrugations at each side. The laying operation shall include all scaffolding work involved. Sheets shall be fixed to the Purlins or other roof members such as hip or valley rafters etc. with galvanised J or L hook bolts and nuts, 8 mm diameter, with bitumen and G.I. limpet washers or with a limpet washer filled with white lead. The galvanised coating should conform to IS 1367 (Pt. XIII)

2.5 Wind Tie: Wind ties shall be of 40 x 6 mm flat iron section or of other size as specified. These shall be fixed at the eaves of the sheets. The fixing shall be done with the same hook bolts which secure the sheets to the purlins.

3.0 Non-Asbestos High Impact Poly Propylene Reinforcement Cement Corrugated Sheets

The sheets shall be of the approved quality and shall conform to IS 14871. The sheets shall be free from cracks, chipped edges or corners and other damages. The product shall be composed essentially of an inorganic hydraulic binder or a calcium silicate binder formed by the chemical reaction of a silicate binder formed by the chemical reaction of a siliceous and calcareous material reinforced by organic fibres and/or inorganic synthetic fibres. Pozzolanic materials process aids, fillers and pigments which are compatible with the fibre reinforced cement may be added. The inorganic hydraulic binder shall be either 33 grade ordinary Portland cement or 43 grade ordinary Portland cement or 53 grade ordinary Portland cement or Portland pozzolana (fly ash based) cement or Portland pozzolana cement (calcined clay based) or rapid hardening cement Portland slag cement.

4.0 Non Asbestos High Impact Poly Propylene Reinforced Cement Semi Corrugated Sheets

These shall be of the specified thickness and of approved quality and shall conform to IS 14871 and shall be free from cracks, chipped edge corners or other damages.

5.0 MUD PHUSKA TERRACING WITH BRICK TILE PAVING

5.1 For mud phuska, selected soil which should be a good quality earth suitable for making bricks not containing excessive clay or sand, free from stones, kankar, vegetable matter and other foreign matter, shall be collected and stacked at site. Before laying on the roof, the soil shall be made damp by adding water about 12 hours earlier. Quantity of water to be added to the soil shall be carefully regulated so that the soil shall have optimum moisture content at the time of laying and compaction on the roof. The soil shall be laid on the roof to requisite thickness and slope, well compacted with wooden rammers and thappies, to obtain an even surface to correct slope. Average thickness of soil after compaction shall be as specified for the item.

5.2 Mud Plaster: After laying the mud phuska, the surface shall be given a coat of mud plaster 25 mm thick and the plaster shall be allowed to dry and crack. The mud plaster shall be prepared from the same soil as for mud phuska.

5.3 Gobri Leaping: After the mud plaster has dried, the surface should be given a coat of gobri leaping so as to completely fill any crack that may have formed in the mud plaster. Five percent of cut back bitumen by mass of dry clay may be added to improve upon the water proofing qualities.

5.4 Laying of Bricks Tile: After the gobri leaping has dried, brick tiles shall be laid using the minimum amount of plain mud mortar (without bhusa) as bedding so as to obtain correct slope and even surface of tile floors. After the tiles are well set and bedding mortar has dried, joints of the tiles shall be grouted with cement mortar of mix 1:3 (1 cement : 3 fine sand)

6.0 CEMENT CONCRETE GOLA

A chase of 75 mm wide and 75 mm deep shall be cut in the parapet wall just above the junction of mud phuska or lime concrete with parapet wall and it shall be filled with cement concrete 1:2:4 (1 cement : 2 coarse sand : 4 stone aggregate 10 mm and down gauge) the external face finish with a slope of 1 : 0.75 and the exposed surface of the gola shall be plastered with cement mortar 1 : 3 (1 cement : 3 fine sand). Expansion joint at every 3.5 to 4.5 metres shall be provided and filled with bitumen filler.

CHAPTER 10.0 - FLOORING AND DADOS

NOTES:

1.0 The rates are exclusive of GST but inclusive of all other taxes, Labour Welfare Cess and contractor's profit.

2.0 BRICK ON EDGE FLOORING

3.0 Bricks of Specified class designations shall be used. Broken bricks shall not be used in flooring except for closing the line. The bricks shall be laid on edge. Flooring shall be laid on base concrete where so provided. Where base concrete is not provided, the earth below shall be properly sloped, watered, rammed and consolidated. Before laying the flooring, it shall be moistened. Bricks shall be so laid that all joints are full of mortar. The thickness of joints shall not exceed 1.0 cm for brick work with bricks of any class designation.

3.0 CEMENT CONCRETE FLOORING

Cement concrete of specified mix grade shall be used. Flooring shall be laid on base concrete where so provided. Immediately before laying the flooring, the base shall be wetted and a coat of cement slurry @ 2 kg of cement spread over an area of one SqM so as to get a good bond between the base and concrete floor. If the cement concrete flooring is to be laid directly on the RCC slab, the top surface of RCC slab shall be cleaned and the laitance shall be removed and a coat of cement slurry @ 2 kg of cement spread over an area of one SqM so as to get a good bond between the base and concrete floor. Floor panels shall be of uniform size and no dimension of a panel shall exceed 2 m and the area of a panel shall not be more than 2 SqM. Normally cement concrete flooring shall be laid in one operation using glass/aluminium/PVC/brass strips/stainless steel strips. Laying of cement concrete flooring in alternate panels may be allowed by the Engineer-in-Charge in case strips are not to be provided. The edges of sunk floors shall be finished and rounded with cement mortar 1:2 (1 cement: 2 coarse sand) and finished with a floating coat of neat cement. The junctions of floor with wall plaster, dado or skirting shall be rounded off where so specified.

4.0 CEMENT CONCRETE FLOORING WITH METALLIC HARDENER TOPPING

Wherever floors are required to withstand heavy wear and tear, use of floor hardener shall be avoided as far as possible by using richer mixes of concrete, unless the use of a metallic hardener is justified on the basis of cost. Where metallic hardener topping is used, it shall be 12 mm thick. Topping shall consist of 12 mm thick layer of mix 1:2 (1 cement: 2 stone aggregate 6 mm nominal size) by volume or as otherwise specified with which metallic hardening compound is mixed in the ratio of 1: 4 (1 metallic concrete hardener: 4 cement) by weight.

5.0 CEMENT PLASTER IN RISERS OF STEPS, SKIRTING, DADO

Plaster at the bottom of wall not exceeding 30 cm in height above the floor shall be classified as skirting. It shall be flush with wall plaster or projecting out uniformly as specified. The work shall be preferably carried out simultaneously with the laying of floor. The finishing of surface shall be done simultaneously with the borders or the adjacent panels of floor. The cement to be applied in the form of slurry for smooth finishing shall be at the rate of 2 kg of cement per litre of water applied over an area of 1 SqM.

6.0 CEMENT CONCRETE PAVEMENT IN COURTYARD AND TERRACE ETC.

The panels shall be of uniform size and no dimension of a panel shall exceed 1.25 m and the area of panel should not exceed 1.25 SqM for the thickness of panels up to 50 mm. Concreting shall be done in alternate panels only and no glass/asbestos strips shall be provided.

7.0 TERRAZO (MARBLE CHIPS) FLOORING LAID IN SITU

The panels shall be of uniform size, not exceeding 2 SqM in area or 2 m in length for in-side situations. In exposed situations, the length of any side of the panel shall not be more than 1.25 metre. Cement slurry @ 2.00 kg per SqM shall be applied before laying of under layer over the base cement concrete/RCC base. 4 mm thick glass strips or 2 mm thick PVC strips/aluminium strips/brass strips / stainless steel strips/copper strips unless otherwise specified shall be fixed with their top at proper level to required slope. The mix for terrazzo shall consist of cement with or without pigment, marble powder, marble aggregate (marble chips) and water. The grinding and polishing may be commenced not before 2 days from the time of completion of laying for manual grinding and not before 7 days for machine grinding.

8.0 CRAZY MARBLE FLOORING

The under layer of crazy marble flooring shall be of cement concrete of thickness 25 mm or as specified. The mix shall normally be 1:2:4 (1 cement: 2 coarse sand: 4 graded stone aggregate 12.5 mm nominal size) by volume unless otherwise specified. The mix of crazy marble stone flooring shall consist of white cement with or without pigment, marble powder, marble chips of 00 Nos. and marble stone pieces and water.

NOTES:

1. For item No. 15.1 specific indication be given while framing estimates whether excavation would be manual or mechanical depending upon the quantum and site conditions.

2. Cost of dewatering for Item No 15.1 has not been added, which would increase with depth of excavation. While estimating, rates may be increased by certain percentage of HSR rates indicated against the sub items.

3. The clauses of MORT&H Specifications,which have been mentioned, may be referred for detailed specifications and construction procedures. The rate mention only brief description of work.

4. The rates include the cost of working of road machinery including cost of fuels, lubricants, stores, establishment, depreciation and intrest chrages. In case the machinery is provided by the department, the working cost as mentioned shall be recovered from the contractor at the rates fixed by the department.

5. The rates are exclusive of GST but inclusive of all other taxes, Labour Welfare Cess and contractor's profit.

CHAPTER 16.0 - RIVER AND CANAL PROTECTION WORKS

Notes:

1. The rate of Item No.16.5 for making pilchi, farash or sarkanda rolls, excludes supply of materials. This item is only to be paid if pilchi, farash and sarkanda are supplied in loose form according to item No.16.1. When supply of this material is taken as compacted in rolls of required diameter and length, no payment over and above Item No.16.1 (b) shall be made. Items 16.8, 16.9 and 16.10 involve the use of pilchi, farash and sarkanda, made into rolls, of 15 cm diameter, and 1.5 meters long. These rates include the cost of making rolls of pilchi farash and sarkanda. No payment for making rolls shall be made over and above the rate of these items, as given in this chapter.

2. The through rates, of item No.16.38, include the cost of stone, at site of work, irrespective of the distance from the source. Variations in actual lead, in such cases, will be taken care of premium / abatement over the scheduled rates. Where, however, stone is not available within the lead specified, but has to be brought from long distance, extra provision for carriage of stone shall be made in the estimates and for calculating the financial implications on tenders. This difference, however, is not payable to the contractor.

3. The rates are exclusive of GST but inclusive of all other taxes, Labour Welfare Cess and contractor's profit.

NOTES:

1. Efforts have been made to describe the various items self-explanatory as much as possible.

2. Rates are derived assuming that all type of materials shall be arranged by the contractor. If any material is decided to be issued departmentally, suitable adjustment for difference of store issue rate and market rate may be made in the estimated rates.

3. The rates given for all the items are applicable to work executed in soils above sub-soil water level. Extra allowance has to be made for work under sub-soil water level.

4. The rates include the carriage up to site of work, handling of material with in a lead of 50 metres. Nothing is to be paid for rehandling of materials.

5. The rates include the cost of water, tools and plants, labour and materials.

6. The rates provided under this chapter include the wastage and breakages of various materials during construction.

7. The rate also cover the cost of all special scaffolding, derricks, jim poles, tools and plant , ropes, guys etc., and nothing extra will be admissible to the contractor for the difficulties involved in erecting the columns absolutely true and vertical.

8. Water charges for water to be arranged by contractor are included in the rates mentioned.

9. The joints between the stone-ware or cement concrete pipe connecting the manholes with the column will be paid for at the rates as a joint of stone ware or cement concrete pipes at the relevant rates given in this schedule and all extra cement concrete required to make this joint perfect and to the requirements of the Engineer-in-charge shall be allowed to the contractor as per cement concrete at the rates laid down for such items.

10. The rates for fixing manhole cover and frames, C.I. or malleable iron steps, errection of C.I. or R.C.C. vent shafts, lowering of S.W. and R.C.C. pipes etc., provided under his chamber include the carriage of the material within a radius of 5 km of the site of works (i.e. all labour rates including carriage of material upto 5 km lead).

11. The rates for manhole chamber construction are only for estimating purposes and non-payment will be made on these rates. The payment for these items will however be made according to the measurements of various quantities of works executed at site.

12. The rates provided under this chapter include the wastage and breakages of various materials during construction.

13. In case of constructing brick or concrete sewers the rates are for 1.5 meters depth of invert level from the ground level. Where depth is greater, additional rate is to be paid for in slabs of 4 metres additional depth or part thereof.

14. The pieces if any of the column shall be assembled and joined at ground level and then hoisted and erected unless specification approval of the Engineer- in-charge in writing permitting the contractor to do shall have been given.

CHAPTER NO. 23 ELECTRICAL INSTALLATIONS, FIRE FIGHTING DETECTION AND ALARM SYSTEM

NOTES:

1. In this chapter items have been broadly categorised as follows:

- **a.** Copper Wiring in MS CONDUIT (surface/recess)
- **b.** Copper Wiring with MODULAR SWITCHES in MS CONDUIT (surface/recess)
- **c.** Copper Wiring in PVC CONDUIT (surface/recess)
- **d.** Copper Wiring with MODULAR SWITCHES in PVC CONDUIT (surface/recess)
- **e.** Copper Wiring in existing PVC/MS Conduit pipe Surface/Recessed for Electrical Points
- **f.** MS Conduit pipe only (surface or in Recessed) for electrical points
- **g.** PVC Conduit pipe only (surface or in Recessed) for electrical points
- **h.** Fittings and Accessories
- **i.** Erection , Carriage and Repairing of Fans and Luminaries
- **j.** MCCB, Distribution Boards MCB's RCCB's Change over etc.
- **k.** Miscellaneous
- **l.** MS Stand, Bus Bar Chamber and PANELS
- **m.** Dismantling

2. Obsolete items in earlier edition of HSR 1988 (Chapter 31) have been deleted

3. Items still being used from earlier HSR have been retained after slightly modifying the nomenclature to suit present day need

4. New items have been added to meet present requirements

5. Distinction between surface and recess wiring has been eliminated, as most of the time at the time of planning exact method is not known. More-over there is insignificant difference in costing of such items

6. For point wiring purpose, earlier classification of Short, Medium, long has been done away with to elliminate intentional or unintentional errors and contractual disputes.

7. New classification of point wiring as Group A, Group B, Group C has been adopted wherein:

Group A : Residential Qtrs Type I, II, III, Hostels

Group B: Residential Qtrs Type IV and above, Barracks, Guest House

Group C: Non-Residential Buildings

8. This system has neither any ambiguity in measurement nor requires physical tape measurement

9. Nowadays due to Architectural requirement and LED fittings, many a times individual switches of luminaries is not provided and one switch controls many fittings. To be just in measurement in such cases, loop point wiring without switch for Group A, GROUP B, GROUP C – has also been provided

10. As cost of capital items like luminaries, vary significantly on continuous basis , only fixing of such items has been kept in the HSR.

11. The rates are exclusive of GST but inclusive of all other taxes, Labour Welfare Cess and contractor's profit.

CHAPTER NO. 24.0 - CABLE LAYING AND STREET LIGHTING

NOTES:

1. In this chapter items have been broadly categorised as follows:

a. Earthing and Lightning Arrestor

b. Under Ground MV Cables

c. HT Cable

d. Street Light

e. Miscellaneous Items

f. Dismantling

g. Civil items

2. New Items for External work has been introduced.

3. Obsolete items of external works in HSR 1988 have been deleted.

4. Items still being used from earlier HSR have been retained after slightly modifying the nomenclature to suit present day need.

5. Copper items used in exposed external work have been omitted as these are prone to theft. Technically also we can get the same results using GI items, by increasing size slightly, which is quite cost effective and less prone to theft.

6. New items have been added to meet present requirements.

7. Items which could not be classified in any specific broad category have been included in Miscellaneous.

8. Commonly used Civil Items being used in external electrical works have been incorporated for ready reference, for ease of estimation by electrical engineers.

9. As cost of capital items like luminaries, LT cables, Electrical Panels vary significantly on continuous basis, only fixing of such items has been kept in the HSR

10. The rates are exclusive of GST but inclusive of all other taxes, Labour Welfare Cess and contractor's profit.
